2010 Plant Sale Species Lists
Planting the Right Plant in the Right Place

Different plants prefer different conditions. While some may be able to survive in a less-than-ideal location, chances are they will never thrive in that spot. To have happy, healthy plants it is important to consider their needs, likes and dislikes before you chose a location to plant them. Certain plants may also attract insects or wildlife to your site. This may be another aspect to consider when choosing which plants you want to add to your landscape. To help you do this, we've developed several lists of plants from our sale for a variety of site conditions.
